Second assessor: Dr.ir. B. Besselink

Abstract

The Abstract is written here

Contents

*Introduction

fraction: $\frac{4}{5}$

A more substantial form:

$$\int_0^T \int_0^a \int_{x_0}^{x_k} f(t, x)^{3z^2} dt dx dz$$

vs

$$\int_0^T \int_0^a \int_{x_0}^{x_k} f(t, x)^{3z^2} dt dx dz$$

This is some text.

Here I am just testing git stuff.

- 1 Derivation of weak/variational form
- 2 Discretized form
- 3 Finding a stability criterion from discretized form
- 4 test and compare
- 5 Conclusion
- 6 Future research
